

The latest version of the CyanIDE development software tools is V2.1.1. It supports the eCOG1X and eCOG16 device families.

Notes:

- CyanIDE 2 does not support the eCOG1k device. Customers using the eCOG1k should continue to use CyanIDE 1.4.X.
 - CyanIDE 2 requires the new eCOG1X USB eICE programming adaptor using the eCOG1X5A5. It does not support the older eICE adaptor based on the FTDI USB device.
Contact Cyan Sales for more information.
 - Existing eCOG1X USB eICE adaptors used with CyanIDE 1.4 are suitable for use with CyanIDE 2. However, CyanIDE 2 and CyanIDE 1.4 require different firmware on the eICE adaptor.
A firmware upgrade can be performed from within CyanIDE 2, and subsequently can be reversed using CyanIDE 1.4 if required.
 - CyanIDE 2 and CyanIDE 1.4.X can be installed on the same machine. They install into different directories and do not share path or environment variables.
 - CyanIDE 2 is supported under Windows XP and Windows Vista only. It is not supported under Windows 2000 or earlier versions.
