

Bola releasnutá nová verzia vývojového prostredia pre ARM mikrokontroléry - TrueSTUDIO v.5.5.1
Predchádzajúca verzia 5.5.0 bola stiahnutá z webu firmy a je už nedostupná.

Opravy

- Fixed problem with mcpu and interwork build flags (mixed ARM/Thumb) which could occur. Users had reported that the build configuration lost the "-mcpu=XYZ" setting.
- Hybrid combinations of "Standard C++, Reduced C" and "Reduced C++, Standard C" are allowed again.
- New Atollic ST-LINK_gdbserver v2.4.1 Pro. Solves flash problem on some STM32 devices introduced in v2.4.0
