

[MPLAB X IDE](#) v2.15 can now be downloaded [here](#).

This release includes:

- Fixed Ctrl+Shift+F for filling in search box with text for Find in Projects
- Added support for RTW on PIC32MZ devices (4x32 bit)
- Expanded Jump Trace display
- Moved to make 4.0 for building
- Added ability to switch project configurations from applications to libraries and vice versa
- Display previous PC for ME2-emulation headers
- Show Hardware stack display on ME2 Emulation Header
- Polarity selection for external triggers on ME2 emulation headers
- Added Common C/Assembly include path option
- IPE EEPROM checksum support in output window
- IPE support for PKoB and licensed debuggers
- Dataflash display for supported devices
- SEGGER J-Link support using SEGGER plugin for support
- Java heap is automatically calculated by the JRE for Windows and Linux, so no need to modify the JRE heap in the mplab_ide.conf file. (Mac is still required if necessary)
