LPCXpresso 7.6.2 (build 326)

February 2015

Changes in this release include:

- Fixed managed linker scripts for GCC 4.9 NewlibNano library names
- Stopped tracking project selection in Symbol Viewer
- Added toolbar button for hide/show Red Trace views. Note that a restart of LPCXpresso is required after showing these views before Red Trace can be used.
- Fixed problem with MCU settings not being saved if changed by using the Quickstart Panel's Edit project settings button
- Display target chip and core type alongside executable name in Debug View
