

Neváhajte a [sosajte](#).

Nový release obsahuje mnoho opráv reportovaných chýb, vylepšenie práce s touchpadom OSX a vylepšené jazykové preklady.

- Pcbnew: fix incorrect assertion failure in specctra export when a footprint contains segments on edge.cut layer.
- Pcbnew: fix bug opening P-CAD ASCII files.
- Eeschema: fix bug where global bus labels were being ignored.
- Eeschema: fix segfault in component library editor when adding pins to alternate body style.
- OSX: fix bug caused by wxBitmap drawing 0 width or height bitmap.
- Pcbnew: fix issues in PCAD import of P-CAD ASCII files.
- Pcbnew: prevent delete hot key from deleting locked footprints.
- Pcbnew: more accurate router pushout force calculation for circle-segment collisions in GAL.
- Fix environment variable initialization issue on Linux.
- Pcbnew: fix incorrect (too small) bounding box EDA\_TEXT, noticeable when chars like j or { are used in zone fill functions.
- Pcbnew: fix exception when importing pcad pcb with zero size pads.
- Pcbnew: loading file with footprint on an inner layer causes an assertion.
- KiCad: fix Preferred Editor dialog.
- Fix graphics rendering on RTL systems.
- Eeschema: fix wxFileDialog assertion when importing component.
- CvPcb: remove footprint library load failure limit.
- Gerber files: ensure the "level polarity dark" is set in each file avoid issues when paneling files.
- Pcbnew: fix issues in DRC dialog issues.
- Eeschema: fix value field editing bug in component library editor.
- Fix mirrored graphics when moving SCH\_BITMAP on OSX.
- Fix display bug when multiple monitor loses window when switched to single monitor.
- Pcbnew: fix DRC write report to file crash bug.
- Fix broken swig import script when using swig 3.0.10.
- KiCad: fix an issue when the schematic editor or the board editor are run from the project tree frame.
- Gerbview: fix incorrect handling of G85 command when reading excellon files.
- Pcbnew: fix crash when loading board files with a missing net section.
- Pcbnew: fix footprint libraries wizard error when opening personal GitHub accounts.
- Pcbnew: fix segfault on BOARDS without tracks.
- Pcbnew: fix dangling board reference crash in GAL.

- 
- Fix window positioning bug when context menu is open.
  - Polygon: fixed polygon filleting glitch for colinear outline segments.

Opravené, nereportované chyby:

- Various fixes to DXF import.
- Fix and improve IDF tools.
- Fix quasi-modal dialog mode in DIALOG\_SHIM class.
- Pcbnew: Highlight a net when cross-probing with Eeschema and highlight net tool is enabled.
- Added 'Reset Grid Origin' hot key (GAL).
- Fix beep on hotkey press in OS X.
- Make color names translatable in color selection dialog.
- OSX: legacy canvas rendering speed improvements.
- OSX: back port touchpad support from development branch.
- Remove front silkscreen default setting for PTH and NPTH pads.
