

This summer, Elektor and Arrow Electronics teamed up to promote electronica Fast Forward, the startup platform powered by Elektor. To celebrate our cooperation, Arrow is offering the Elektor audience free boards for use in their electronics projects.

[>>Here<<](#)

If you have an idea for a project, we invite you to select one of the 20 boards that Arrow is making available. Use the form below to select a board and then briefly describe your project idea in two sentences or less. Arrow will have a look at your idea, and if you meet their criteria, you can either pick up your board at the electronica trade fair (November 2018 in Munich, Germany) or have Arrow send it to you. Furthermore, participants with the three best ideas will be invited to attend electronica trade fair!

Arrow has made hundreds of boards available. Good luck!
